

$$D_x = D_{y_1} = D_{y_2} = D_{y_3} = D_z = \mathbb{Z}$$

$$\varphi(x) \equiv x > 1$$

Основа функции и так функцирование множеств

$$u: (y_1^{i+1} > y_1^i \vee (y_1^{i+1} = y_1^i \wedge y_3^i > y_3^{i+1}))$$

$$v: y_1 \leq x^3 \wedge (y_3 = x \vee y_2 = x^2)$$

Выражение, описывающее все возможные

$$\exists q(x, \bar{y}) = ((y_3 = x \wedge y_2 \leq x) \vee (y_1 = x^2 \wedge x \leq y_2 \leq x^2)) \wedge y_1 = y_2 \cdot x$$

$$SA \quad x > 1 \rightarrow ((x = x \wedge 1 \leq x) \vee (x = x^2 \wedge x \leq 1 \leq x^2)) \wedge x = x$$

$$ATA \quad x > 1 \wedge q(x, \bar{y}) \wedge y_2 < y_3 \rightarrow ((y_3 = x \wedge (y_2 + 1) \leq x) \vee (y_3 = x^2 \wedge x \leq y_2 + 1 \leq x^2)) \wedge y_1 + x = (y_2 + 1) \cdot x$$

D_3 : нужно доказать $y_1 = y_2 \cdot x$ это условие

нужно доказать $(y_2 + 1) \leq x$ или $x \leq y_2 + 1 \leq x^2$

$$(y_2 \leq x \wedge y_3 = x \wedge y_2 < y_3) \quad (x \leq y_2 + 1 \leq x^2 \wedge y_3 = x, y_2 < y_3)$$

$$AFIA \quad x > 1 \wedge q(x, \bar{y}) \wedge y_2 \geq y_3 \wedge x = y_3 \rightarrow q(x, \bar{y}, y_2, y_1)$$

$$\Rightarrow ((y_1 = x \wedge y_2 \leq x) \vee (y_1 = x^2 \wedge x \leq y_2 \leq x^2)) \wedge y_1 = y_2 \cdot x$$

D_3 : нужно доказать $y_1 = x^2 = x \cdot x$

$$\begin{aligned} & y_2 = x \\ & x \geq y_2 \geq x = y_3 \end{aligned}$$

$$y_3 = x \wedge y_2 \leq x$$

$$ATAu: x > 1 \wedge q(x, \bar{y}) \wedge y_2 < y_3 \rightarrow y_1 + x > y_1 \vee (y_1 + x = y_1 \wedge y_1 + x > x)$$

$$AFIAu: x > 1 \wedge q(x, \bar{y}) \wedge y_2 \geq y_3 \wedge x = y_3 \rightarrow y_1 > y_1 \vee (y_1 = y_1 \wedge y_1 > y_3)$$
